

NSW'S LIGHTBULB MOMENT

WE ARE NOW IN THE DARK AGE

DIAL A DUMP HAS THE SOLUTION

**ENERGY FROM WASTE
TRIED, PROVEN AND SAFE WORLDWIDE**

Artist's Impression of the TNG Facility

Dial A Dump's The Next Generation (TNG) Energy from Waste proposal is a great solution to Sydney's growing problem of waste disposal and diminishing landfill, due to run out in 20 years.

Using residual waste after re-cycling to generate electricity makes absolute sense.

Equipped with the latest technology we can safely deliver:

- **Cheaper electricity**
- **Additional baseload power generation from a 60% renewable source**
- **A safe alternative to landfilling**
- **Reduction in greenhouse emissions**
- **A cleaner, cheaper alternative to coal burning for electricity generation**
- **More jobs.**

Over 2,200 Energy from Waste facilities in 35 countries are currently operating successfully and safely, while a recent independent poll shows that 69% of the Sydney community are already in favour of Energy from Waste.

Dial A Dump is a principal provider of waste collections and waste management services in New South Wales.

Dial A Product is the producer and supplier of a vast range of quality recycled products, including wood chips, road base and aggregates.

Genesis Xero Waste is the market leading provider of waste transfer, landfill and recycling services for industry.

The Next Generation is leading the way for Energy from Waste technology in Australia.
